Disclaimer

Coinsult is not responsible if a project turns out to be a scam, rug-pull or honeypot. We only provide a detailed analysis for your own research.

Coinsult is not responsible for any financial losses. Nothing in this contract audit is financial advice, please do your own research.

The information provided in this audit is for informational purposes only and should not be considered investment advice. Coinsult does not endorse, recommend, support or suggest to invest in any project.

Coinsult can not be held responsible for when a project turns out to be a rug-pull, honeypot or scam.

Tokenomics

Rank	Address	Quantity (Token)	Percentage
1	0xc6c09b3f11bab468a1c243c2e87d6d044505fb4a	325,000	100.0000%

Source code

Coinsult was commissioned by MoneyPrinter to perform an audit based on the following smart contract:

https://bscscan.com/address/0xb214dcc2170a24c2a6cf21e01c145fd5966e23d5#code

Manual Code Review

Low-risk

5 low-risk code issues found.

Could be fixed, will not bring problems.

Contract contains Reentrancy vulnerabilities:

_transferFrom(address,address,uint256)

Additional information: This combination increases risk of malicious intent. While it may be justified by some complex mechanics (e.g. rebase, reflections, buyback).

More information: Slither

```
recipient,
```

Function which sends eth to arbitrary destination
 Ensure that an arbitrary user cannot withdraw unauthorized funds. More information: Slither

```
function swapBack() internal swapping {
        uint256 balanceBefore = address(this).balance;
        router.swapExactTokensForETHSupportingFeeOnTransferTokens(
            value: amountETHToTreasuryAndSIF.mul(treasuryFee).div(
                treasuryFee.add(safuuInsuranceFundFee)
            value: amountETHToTreasuryAndSIF.mul(safuuInsuranceFundFee).div(
                treasuryFee.add(safuuInsuranceFundFee)
```

Block.timestamp can be manipulated by miners.
 Avoid relying on block.timestamp.

More information:

https://github.com/crytic/slither/wiki/Detector-Documentation#block-timestamp

```
router.swapExactTokensForETHSupportingFeeOnTransferTokens(
    amountToSwap,
    0,
    path,
    address(this),
    block.timestamp
);
```

Variable written twice
 Fix or remove the writes.

More information:

https://github.com/crytic/slither/wiki/Detector-Documentation#write-after-write

- Missing zero address validation.

Check that the new address is not zero.

```
function setFeeReceivers(
    address _autoLiquidityReceiver,
    address _treasuryReceiver,
    address _safuuInsuranceFundReceiver,
    address _firePit
) external onlyOwner {
    autoLiquidityReceiver = _autoLiquidityReceiver;
    treasuryReceiver = _treasuryReceiver;
    safuuInsuranceFundReceiver = _safuuInsuranceFundReceiver;
    firePit = _firePit;
}
```

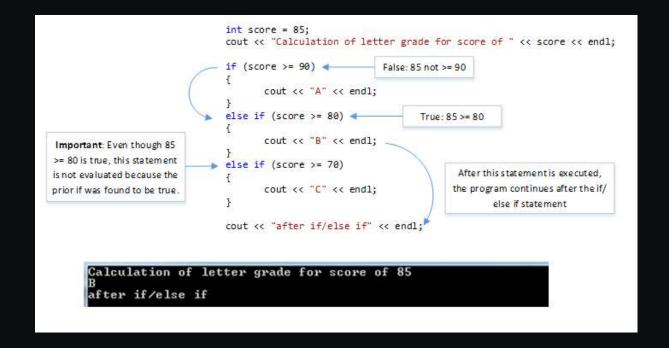

Medium-risk

1 medium-risk code issues found. Should be fixed, could bring problems.

- If statements might never be reached

If the second statement is reached (>= 365 days), then the other two below will not be called upon.

```
if (deltaTimeFromInit < (365 days)) {
    rebaseRate = 2355;
} else if (deltaTimeFromInit >= (365 days)) {
    rebaseRate = 211;
} else if (deltaTimeFromInit >= ((15 * 365 days) / 10)) {
    rebaseRate = 14;
} else if (deltaTimeFromInit >= (7 * 365 days)) {
    rebaseRate = 2;
}
```

High-risk

0 high-risk code issues found Must be fixed, and will bring problems.

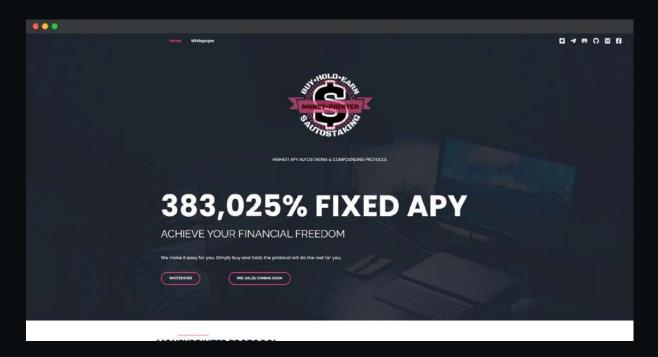

Extra notes by the team

- Owner can not change the fees
- Contract has fees: 18% buy tax and 26% sell tax.
- The ownership is not renounced.
- Owner can blacklist contract addresses
- Contract uses rebase

Contract Snapshot

```
contract MoneyPrinter is ERC20Detailed, Ownable {
   using SafeMath for uint256;
   using SafeMathInt for int256;
   event LogRebase (uint256 indexed epoch, uint256 totalSupply);
   IPancakeSwapPair public pairContract;
   mapping(address => bool) isFeeExempt;
   modifier validRecipient(address to) {
   uint256 public constant DECIMALS = 5;
   uint256 public constant MAX UINT256 = ~uint256(0);
   uint256 private constant INITIAL FRAGMENTS SUPPLY =
   uint256 public liquidityFee = 40;
   uint256 public treasuryFee = 80;
   uint256 public safuuInsuranceFundFee = 50;
   uint256 public sellFee = 80;
   uint256 public firePitFee = 10;
   uint256 public totalFee =
       liquidityFee.add(treasuryFee).add(safuuInsuranceFundFee).add(
           firePitFee
       );
```

Website Review

Coinsult checks the website completely manually and looks for visual, technical and textual errors. We also look at the security, speed and accessibility of the website. In short, a complete check to see if the website meets the current standard of the web development industry.

- Mobile Friendly
- Contains no jQuery errors
- SSL Secured
- No major spelling errors

Loading speed: 76%

Rug-pull Review

Based on the available information analyzed by us, we come to the following conclusions:

- Locked Liquidity No liquidity yet
- Large unlocked wallets Tokens not yet distributed
- Doxxed Team (KYC)

Honeypot Review

Based on the available information analyzed by us, we come to the following conclusions:

- Ability to sell
- Owner is not able to pause the contract
- Router hard coded in the contract

Note: Please check the disclaimer above and note, the audit makes no statements or warranties on business model, investment attractiveness or code sustainability. The report is provided for the only contract mentioned in the report and does not include any other potential contracts deployed by the project owner.
